

# Information Management Support

Tellevate works with our clients to incorporate information technology to support and complement business needs, not drive them.

Tellevate will challenge your organization to find appropriate, available information technology tools that help program managers simplify their documentation and data management burden.

We leverage existing systems and complement internally built tools with off-the-shelf software, when needed.

## Microsoft® SharePoint® Solutions

Tellevate specializes in developing SharePoint® and other Microsoft®-based tools for environmental, health, and safety (EHS) information management, including extensive experience developing compliance and auditing tools. We offer a complete EHS management system built using SharePoint®, which can be hosted on our clients' existing computer networks or externally (Cloud).

## Auditing Software

Through our partnership with Kestrel Management Services, we implement the dynaQ™ auditing software platform ([www.dynaqonline.com](http://www.dynaqonline.com)). This web-based solution streamlines the auditing process with:

- Simple data collection
- Quick report and metric creation
- Action tracking and notification

In addition, dynaQ™ empowers your audit professionals to integrate the latest mobile technology for unmatched data collection efficiency while in the field.

Tellevate's information management support services include:

- Assessing existing information management tools and software
- Business process mapping and requirements development
- Performing needs assessments and developing technical specifications
- Evaluating and recommending off-the-shelf software products
- Developing information management systems using Microsoft® SharePoint®
- Software implementation project management and performance evaluation
- Information management training for program managers and organization personnel
